The Scroll-Stopping Script Framework

This framework shows you how to structure short videos that capture attention, keep people watching, and drive engagement.

1. Start With a Contrarian Hook

Your first line must challenge what people believe. This creates an immediate pattern interrupt and forces the brain to pay attention.

Use a sentence like :

"You don't have X problem. You have Y problem."

The goal is to create curiosity in the first three seconds.

2. Diagnose the Real Problem

After the hook, explain the hidden issue behind the symptom.

Your job is to reveal the real problem: **message and structure.**

Example:

"If your script is weak, motion design is useless."

Keep this line simple and direct. It should counter common beliefs.

---

3. Create a Clear Cause and Effect

This is where you connect the problem to a real outcome.

Examples:

- If your message isn't clear immediately, attention disappears.
- If the structure is weak, editing only hides the problem.

Avoid vague statements. Be concrete.

---

4. The punchline

Strong videos contain one line people remember.

This line summarizes the insight in a short, punchy way.

Examples:

- Editing decorates. Structure converts.
- Over-editing hides weak ideas.
- Structure is what holds attention.

Think of this as THE "quote" of the video.

---

5. Position the Solution

After exposing the problem, briefly introduce the solution.

Do not over-explain. Keep it simple.

Example:

"Structure is what makes people watch."

This reinforces your authority without sounding like a long explanation.

---

6. End With a Simple Engagement Trigger

Instead of asking for likes or follows, ask for a **specific action**.

The best action is a comment, because it signals engagement to the algorithm.

Example:

"Want my script framework?
Comment 'STRUCTURE'."

The action should be:

- easy
- clear
- one word if possible

Use this structure for short-form videos.

1. Contrarian hook
2. Reveal the real problem
3. Explain the consequence
4. Deliver the memorable line
5. Position the solution
6. Call to action
